CISCO Professional Services Subscription

PS-Sub · formerly Lifecycle Services (LCS)

Abilities at a Glance

Seller & customer conversation sheet · October 2026

WHAT IT IS

PS-Sub is Cisco's flexible-consumption professional services subscription. It translates IT initiatives into measurable business outcomes using Cisco experts, telemetry-based Digital Insights, and a co-defined KPI cadence. LCS is the outcomes engine inside Outcome Services — same engagement model, current EA / Services packaging. Transactional SME and SOW work is purchased separately.

KEEP THE MOTION CLEAN

Use PS-Sub / LCS for

Advisory, governance, architecture, KPI baselining, PSIRT / lifecycle insight, 90-day plans, QBRs, named CE / SA.

Do not use it as

A T&M hours bank, high-frequency hands-on, incident response, third-party gear, or a place to fold a PS SOW.

01 Outcome Services

LCS core · business-outcome aligned

- Outcome Consulting: set priorities, baseline KPIs, analyze, recommend, plan, assist implementation, snapshot vs baseline.
- Digital Insights: regular baseline comparisons and recommendations from Cisco telemetry plus agreed new insights.
- Project Management: 90-day delivery plan; quarterly activity and artifact report.

02 Expert-as-a-Service

Named expert · specified tech / architecture

- Consulting Engineer: design, implementation, operations, and knowledge transfer for the quoted technology.
- Solution Architect: architecture vision, strategy development, and standards alignment.
- Includes Cisco tools, analytics, software, knowledge resources, and systems for the Services Term.

03 Attached Services

Product / family-specific consulting

- Targeted to a Cisco product or product family quoted on the subscription.
- Typical categories: onboarding, implementation, adoption, and optimization.
- Consumed across the Services Term — not a one-shot PDI SOW and not T&M.

FIVE-STEP ENGAGEMENT · CONTINUOUS

1. **Baseline** — KPIs & measurement
2. **Analyze** — Risks & opportunities
3. **Recommend** — Actions & practices
4. **Execute** — Chosen workstyle
5. **Measure** — KPI / QBR cadence

ENGAGE THE WAY YOU WORK

Advise Me	Do It With Me	Do It For Me
Cisco advises	Side-by-side	Cisco / partner execute

BUSINESS OUTCOMES · SPECIFIED ON THE QUOTE

Grow faster

- Digital transformation — new models, automation, data, tools
- Enable capabilities through new technology — adoption to value
- Improve customer experience — fewer client-impacting outages
- Improve end-user experience — hybrid / collab productivity
- Grow revenue — stable, evolvable infrastructure

Be stronger

- Reduce risk — find issues, prioritize remediation
- Demonstrate compliance — gap ID and remediation steps
- Enhance security — posture, config, policy, controls
- Manage reputation / brand — secure digital experience

Deliver better

- Optimize productivity — infrastructure and operating practices
- Reduce cost — innovation, recommended practices, process

90-day operating cadence

Kickoff agrees activities and request format. Then 90-day plan → deliver → quarterly report / QBR → re-plan. Intended work is reviewed and resized to available resources each quarter.

DIGITAL INSIGHTS ABILITIES

Telemetry + AI/ML from 3M+ Cisco devices, combined with expert judgment. Baseline, compare, recommend.

- Config complexity, misconfig, and inconsistency on like features
- Customer config-standard definition, audit, and reporting
- End-to-end policy / design mapping to simplify support
- Field Notice exposure tracking
- Hardware lifecycle: End-of-Sale, Last Date of Support, End-of-Life
- Policy variation that adds design complexity
- PSIRT advisories rated Critical or High
- Device crash-risk identification and guidance
- Scalability versus verified configuration limits
- Software version fitness, upgrade triggers, adoption strategy
- Syslog operational / performance service-impact risk
- Air-gapped collector option for highly secure networks

Data required. Use Cisco collectors, a customer data drop, or a quoted air-gapped appliance for classified / government networks.

SCRUM SERVICES & OUTCOME SCALE

Add-on delivery capacity. Outcome Scale is the same idea, smaller increment. Not T&M.

- Planning & architecture across the deployment lifecycle
- Design engineering for new and incremental Cisco designs
- Implementation / migration planning and implementation support
- Assessments: capacity, reliability, performance, security
- Test strategy, planning, execution, and retest support
- Security assessment and resilience (not incident response)
- Cloud transformation strategy ready for execution
- Observability / assurance on existing Cisco products
- Services as Code — automation and DevOps for network state
- Day-2 assurance: fault and change management
- Matrix analytics for mobility performance / OSS-BSS

EXPERT-AS-A-SERVICE ROLES

Consulting Engineer

Design, implement, operate, knowledge transfer.

Solution Architect

Vision, strategy, architecture standards alignment.

BOUNDARIES · QUOTE AND SERVICE DESCRIPTION CONTROL SCOPE

Cisco Confidential — Cisco and partner use

Supplements a current Cisco Support or Partner Support agreement on covered products. Not T&M. Cisco technologies only — no work on third-party equipment. "Outcome" does not guarantee a result. Delivery stops the last business day of the term. Digital Insights require data collection (or a purchased air-gapped collector). Scrum / Outcome Scale / EaaS are subscription add-ons, not an hours bank. Hands-on upgrade, hardening, and Last-Date-of-Support remediation belong on a PS SOW (PS-Transactional), not folded into PS-Sub.
